

**REPORT OF THE
INTERNATIONAL
PACIFIC HALIBUT COMMISSION**

APPOINTED UNDER THE CONVENTION BETWEEN CANADA AND THE
UNITED STATES OF AMERICA FOR THE PRESERVATION OF
THE NORTHERN PACIFIC HALIBUT FISHERY

NUMBER 36

**CATCH RECORDS OF A TRAWL SURVEY
CONDUCTED BY THE INTERNATIONAL
PACIFIC HALIBUT COMMISSION BETWEEN
UNIMAK PASS AND CAPE SPENCER, ALASKA
FROM MAY 1961 TO APRIL 1963**

COMMISSIONERS:

WILLIAM A. BATES

HAROLD E. CROWTHER

MARTIN K. ERIKSEN

RICHARD NELSON

WILLIAM M. SPRULES

MATTIAS MADSEN
(To May, 1964)

SEATTLE, WASHINGTON

1964

FOREWORD

The terms of the 1953 Convention between the United States and Canada for the Preservation of the Halibut Fishery of the Northern Pacific Ocean and Bering Sea provide that the International Pacific Halibut Commission shall publish a report of its activities and investigations from time to time.

The present report, the thirty-sixth published by the Commission, departs from previous Commission reports in that it is a data report recording the detailed information on the catches resulting from a special survey of the demersal fish stocks on the continental shelf between Unimak Pass and Cape Spencer, Alaska during the period May 1961 and April 1963. This survey was undertaken at the request of the Governments of Canada and the United States with funds specifically provided for the purpose. The continuity and geographical scope of the survey qualified it as one of the most extensive ever undertaken.

Summarized reports on the results of the survey have been presented previously to the Governments of Canada and of the United States for use by their national sections of the International North Pacific Fisheries Commission. Also, much of the data has been made available to the United States Bureau of Commercial Fisheries and to the Fisheries Research Board of Canada for use in their respective exploratory fishery operations. In addition, most of the incidental ichthyological materials and hydrographic observations collected have been contributed to various Canadian and United States government institutions or investigators. From time to time reports concerned with the analysis of the catch data will be published by the Commission.

CATCH RECORDS OF A TRAWL SURVEY CONDUCTED BY THE
INTERNATIONAL PACIFIC HALIBUT COMMISSION
BETWEEN UNIMAK PASS AND CAPE SPENCER, ALASKA
FROM MAY 1961 TO APRIL 1963

by

INTERNATIONAL PACIFIC HALIBUT COMMISSION

ACKNOWLEDGMENTS

This survey could not have been completed without the cooperation and assistance of many people. Biologists and oceanographers of the United States Bureau of Commercial Fisheries and of the Fisheries Research Board of Canada were consulted during the planning stages of the program. The captains of the vessels: M. J. Evich of the ST. MICHAEL, Olaf Angell of the ARTHUR H., Lars Svege of the MORNING STAR, and Charles Loftus of the WESTERN FLYER, carried out an exacting fishing schedule throughout all seasons of the year, often under severe weather conditions. The biological aides on each vessel, most of whom were from the University of British Columbia, contributed greatly to the success of the program.

All members of the Commission's staff, in addition to their regular duties, assisted with the planning, coordinating and supervising of the work including summarizing the data and preparing the reports made to the governments. G. Morris Southward deserves special mention for carrying forward the organization and compilation of the tables presented in this report.

INTRODUCTION

The International Pacific Halibut Commission, beginning on May 1, 1961 and continuing until May 1, 1962, conducted an investigation of the distribution and availability of halibut and of the other associated bottom or demersal species using trawl gear of the type used by the Pacific coast trawl fleets. The area of operations extended between the eastern end of Kodiak Island and Unimak Pass, a distance of 550 miles along the coast of Alaska, and included about 40,000 square miles of shelf area.

Commencing in May 1962, the investigation was extended another year to include the grounds between the eastern end of Kodiak Island and Cape Spencer, Alaska, a distance of 480 miles along the coast and covering about 25,000 square miles of shelf area.

The purpose of the survey was to secure data which might provide a basis for estimating the possible extent of a trawl fishery for demersal fish in the survey region and the effect that such a trawl fishery would have upon the population of adult and juvenile halibut, and in turn upon the established Canadian and United States halibut setline fishery in the region.

This report presents a summary of the observations made at approximately 1,560 stations established on the shelf area during the two-year survey. Catches are grouped according to halibut, other flatfishes, roundfish, crustacea and elasmobranchs and are expressed as catches per one-hour haul. Stations which could not be fished because of the rough bottom conditions are indicated. Stations that were intentionally omitted from the program are not indicated. In addition to the biological observations recorded, bathythermograph observations were made at nearly all stations occupied.

SAMPLING PATTERN

A predetermined pattern of sampling stations was established on the shelf off the coast of Alaska between Unimak Pass and Cape Spencer (Figures 1 and 2). The stations were arranged in parallel north-south lines, 15 minutes of longitude apart, running outward from the shoreline of the mainland to a depth of 250 fathoms. Along these lines the stations were located six minutes of latitude apart continuing from the shoreline to the 100-fathom line with additional stations at 140 and at 250 fathoms. The latter depth is approximately the maximum to which most Pacific coast trawlers of the United States and Canadian fleets can effectively operate due to cable capacity of their trawl-winch drums. Submarine canyons deeper than 100 fathoms within the general shelf area were included in the basic network of stations and were considered part of the shelf area in the analysis. The lines of stations were numbered from west to east commencing at Unimak Pass. The individual stations on each line were identified alphabetically outward from the mainland shore.

Provision was made for sampling the survey regions during the summer, fall and winter periods of the year to obtain information on the seasonal distribution and availability of halibut and other species to a trawling operation. These periods of sampling are designated Rounds I, II and III in the order of occurrence in each 12-month period of sampling.

During Round I between May 1, 1961 and July 31, 1961 an attempt was made to occupy each station of the sampling pattern. However, due to rough bottom not every station could be fished.

In Round II, from August 16, 1961 to December 11, 1961 inclusive, it was planned to sample the area twice, fishing the odd-numbered lines of stations first and then the even-numbered lines. This was done to assure complete sampling of the survey area at least once during the expected severe weather

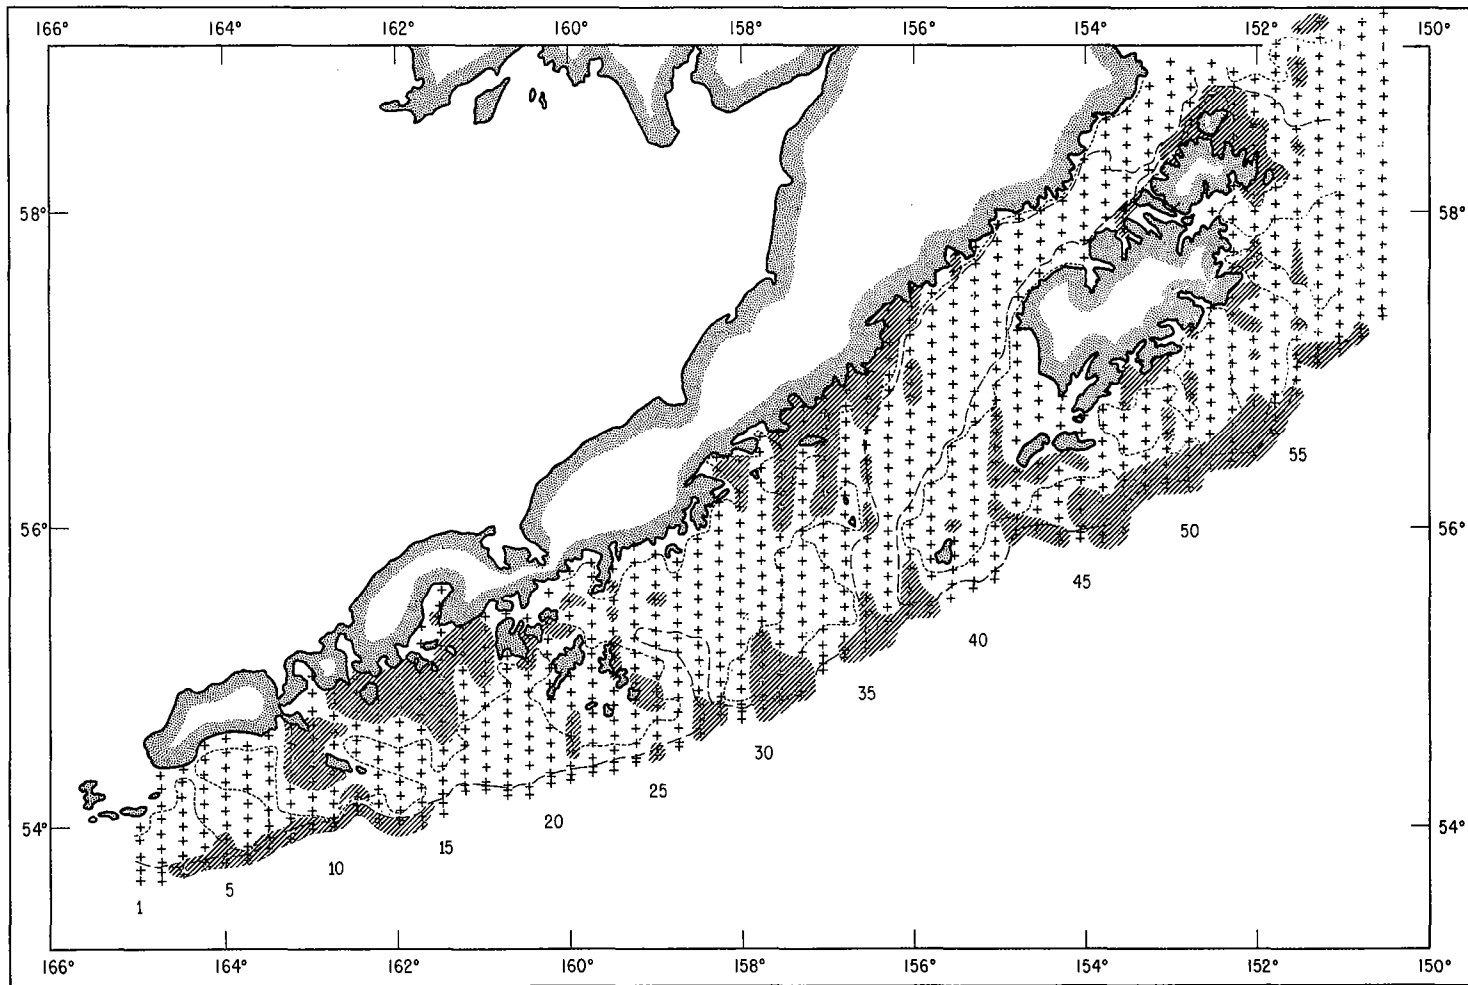

Figure 1. Pattern of stations sampled between Unimak Pass and the eastern end of Kodiak Island, Alaska during the 1961-1962 survey. Non-trawlable areas are marked with diagonal shading. Lines of stations shown by plus (+) signs are numbered from left to right with every fifth line identified.

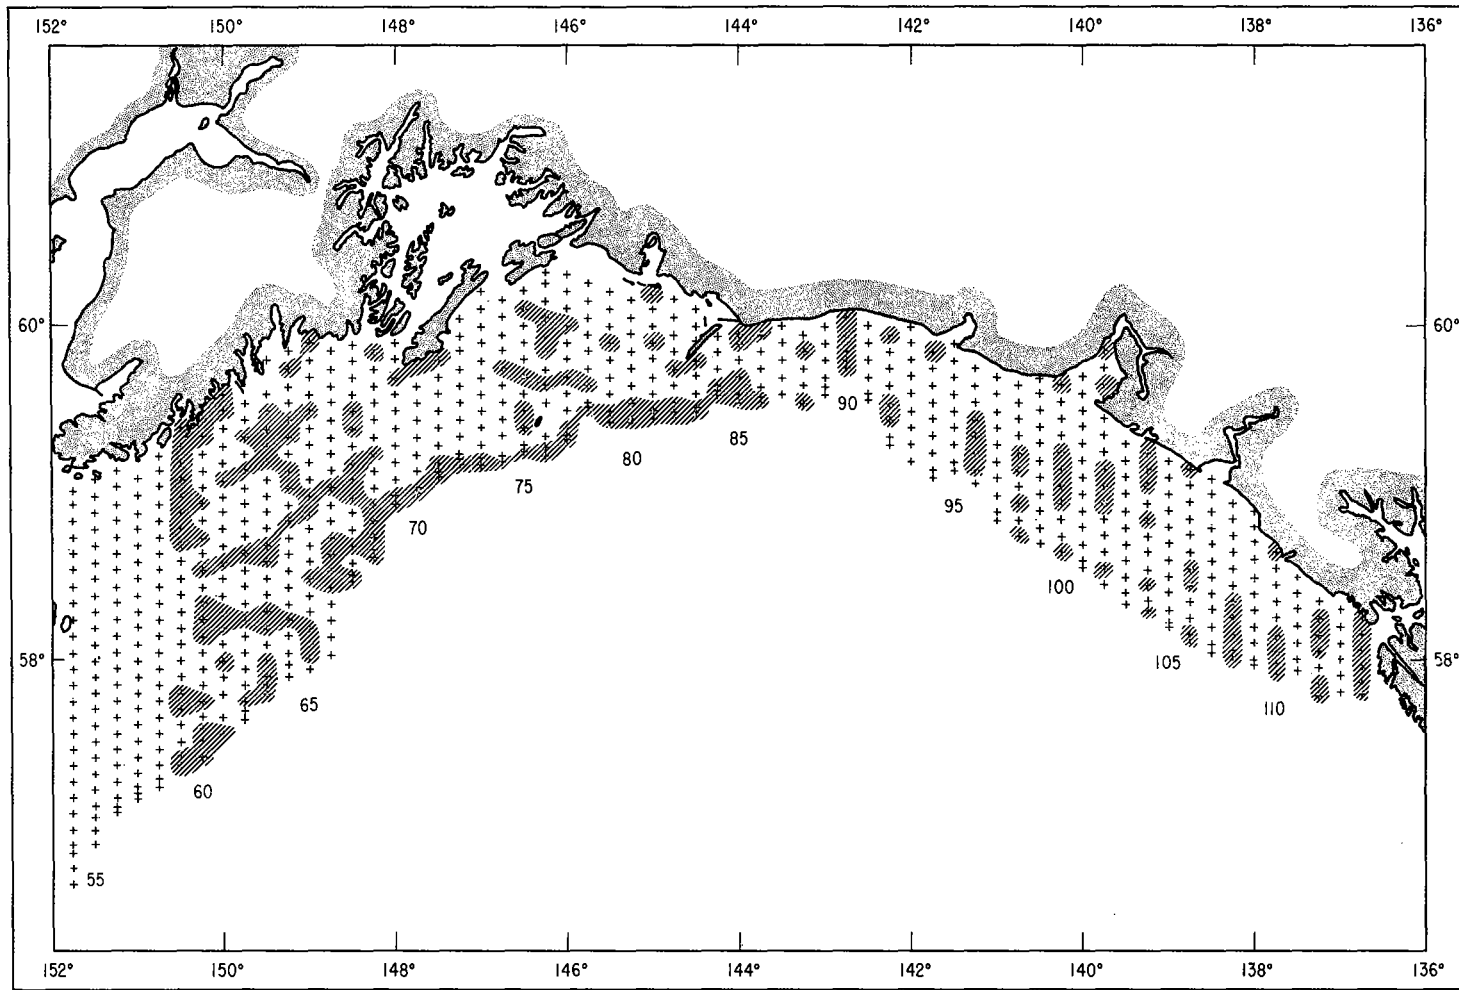

Figure 2. Pattern of stations sampled between the eastern end of Kodiak Island and Cape Spencer, Alaska during the 1962-1963 survey. Non-trawlable areas are marked with diagonal shading. Lines of stations shown by plus (+) signs are numbered from left to right with every fifth line identified.

conditions of the early winter months. Early storms permitted completion of only the first part of the schedule, namely the stations on odd-numbered lines 1 to 57.

During Round III, between January 16, 1962 and May 1, 1962, an attempt was made to survey the area for a third time. From the experience during Round II and in anticipation of stormy weather it appeared that all stations and possibly even the alternate lines of stations could not be occupied in the time available. Consequently, a particular effort was made to sample four large sectors of the survey area — near the eastern end of Kodiak Island on lines 50 to 55, around Chirikof Island on lines 37 to 41, around the Shumagin Islands on lines 17 to 26, and the area off Unimak Island on lines 1 to 6. These groups of lines were known to possess considerable trawlable bottom and upon which catches of halibut had been made in previous rounds.

Procedures during the second year of the survey, 1962-1963, were identical to those used during the sampling of the grounds between the eastern end of Kodiak Island and Unimak Pass, namely an attempt was made to occupy each station of the sampling pattern during Round I, June 6 to August 28, 1962. In coordinating this survey with like activities of the United States Bureau of Commercial Fisheries in the region, 128 stations were omitted from the sampling pattern between the eastern end of Kodiak Island and Cape Spencer. Again to counter bad weather usually prevalent in the fall and winter months which would prevent coverage of the overall area within the projected period of the survey, only the even-numbered lines of stations were sampled during Round II, September 9 to December 16, 1962; and in Round III from about January 15 to March 31, 1963*, only representative groups of stations were sampled.

The number of stations fished and the number of stations that were occupied but found to be non-trawlable are listed in the following table. Some stations, not included in the table, were regarded as non-trawlable due to their unsafe proximity to the shoreline or reefs.

	Number of Stations Fished	Number of Non-Trawlable Stations
<hr/>		
<u>1961 - 1962</u>		
Round I	474	406
Round II	196	213
Round III	119	316
 <u>1962 - 1963</u>		
Round I	270	205
Round II	147	152
Round III	66	5

UNIT OF FISHING EFFORT

For the purpose of this report a haul of 60 minutes duration was adopted as the standard unit of effort. All weights and counts of fish or shellfish are recorded herein on the basis of a one-hour haul. If the duration of a haul was more or less than 60 minutes the catch has been changed proportionately.

* The three vessels did not commence Round III on the same date.

VESSELS AND PERSONNEL

Three trawlers were chartered during each year from a number of Canadian and United States vessels tendered. The names of the vessels, net tonnage, length, horsepower, and cable capacity of the trawl-winch drums were as follows:

Vessel	Year Used	Net Tonnage	Length	Horse- power	Cable Capacity
ARTHUR H	1961-1962-1963	59	73	300	600 fms.
MORNING STAR	1961-1962 -	53	65	296	550 fms.
ST. MICHAEL	1961-1962-1963	73	72	200	600 fms.
WESTERN FLYER	1962-1963 -	63	71	290	650 fms.

The fishing crew on each vessel consisted of two fishermen, a cook-fisherman and a captain, the latter possessing long and successful experience in the commercial trawl fishery off the coasts of Washington and British Columbia.

Three biological aides of the Commission were placed on each vessel to process the catches and to record pertinent data. At the outset of the survey, biologists from the Commission's permanent staff made trips to standardize methods of operation between vessels and to instruct the aides. From time to time a biological aide employed by the United States Bureau of Commercial Fisheries was provided accommodations on each vessel to collect detailed data upon king crab.

FISHING GEAR

Each vessel was equipped with Pacific coast bottom trawls having a 71-foot headrope of 7/16-inch steel wire wrapped with 1/2-inch manila rope and a 94-foot groundrope of 1/2-inch wire wrapped with 9/16-inch manila rope and rubber hose. The wings and body of the nets were constructed of 4-inch mesh No. 36 multi-filament nylon; the intermediate section of 4-inch mesh No. 60 multi-filament nylon; and the codend of 3 1/2-inch No. 96 multi-filament nylon. The mesh size was the stretched measure between the center of knots. The otterboards 3 1/2 feet by 7 feet, were rigged with a 180-foot snagline of 1/2-inch wire between them and were attached to the wings by 180-foot wire towlines. Chafing gear, consisting of 8-inch mesh, 3/8-inch polypropylene rope, encircled the codend.

DESCRIPTION OF TABLES

Observations of the stations occupied are summarized in Table 1. Station number; month, day and year; location in degrees and minutes of west longitude and north latitude; name of vessel; duration of haul in minutes; maximum depth of haul in fathoms; and the mesh size in inches of the codend of the trawl are listed at the head of each column.

The number and weight of halibut above and below the minimum legal size limit of the 1961 Pacific Halibut Fishery Regulations* are listed as "NO. LESS 65" and "NO. GTR 64" corresponding to the number less than 65 centimeters of length and the number greater than 64 centimeters of length

* Twenty-six inches or five pounds dressed weight.

respectively. The notation "WT. LESS 65" and "WT. GTR 64" refer to the same designation except in terms of pounds of weight.

The catch of fish other than halibut are summarized in two categories: flatfish and roundfish. In each category the more frequently occurring species are listed, the remaining species that were taken are grouped into a single entry and designated as miscellaneous flatfish (MISC. FTFISH) and miscellaneous roundfish (MISC. RDFISH). Shellfish, for which number rather than weight are given, are treated similarly, and elasmobranchs (ELASMOBRCH) are listed separately. The total weight of halibut, flatfish, and roundfish, is the summation of the items in the grouping.

The stations that could not be fished because of rough bottom conditions are indicated in Table 1 as "N TRWL." standing for non-trawlable. Lines of stations that were intentionally omitted from the sampling pattern during Rounds II and III of each sampling year have been omitted from the table.

Bathythermograph observations were taken at every station where conditions permitted. To reduce the size of the tables, only those stations where a bathythermograph observation was not taken are listed in Table 2.

It was necessary from time to time to subsample the catch when an unusually large poundage of fish was taken in a haul. The station number and date of such hauls where catch records are based on a subsample are given in Table 3.

Occasionally the fishing gear became twisted or the net was torn to a substantial extent, and since either situation might appreciably reduce the catch they were noted on the field records and the haul was listed as non-effective. Accordingly, any judgments based on such data must account for the non-comparable nature of the haul. The station number and date of the non-effective hauls are listed in Table 4.

NAMES AND ABBREVIATIONS OF SPECIES TAKEN

<u>Common Name</u>	<u>Abbreviated in Table 1 as:</u>	<u>Scientific Name</u>
Alaska plaice	AAA PLAICE	<i>Pleuronectes quadrituberculatus</i>
Atka mackerel	MISC. RDFISH	<i>Pleurogrammus monopterygius</i>
