

INTERNATIONAL PACIFIC

HALIBUT COMMISSION

IPHC Fishery-Independent Setline Survey (FISS) Design & Implementation in 2025

Agenda item: 5.2.2
IPHC-2025-RAB026-07
K. Ualesi

Primary Objective

- Standardised, fishery-independent data collection for the Pacific halibut stock (*Hippoglossus stenolepis*) assessment and stock distribution estimation
 - Pacific halibut distribution and abundance trends
 - Collection of biological data (sex, maturity, and age)

Standardisation

GEAR

- Fixed & Snap Gear
 - Snap gear not used in 2025
- Each skate meets the following specifications:
 - 1800 ft (548.6 metres) with 100 hooks spaced 18 ft (5.5 metres) apart
 - No. 3 (16/0) circle hooks threaded through the front on 24-48 inch (61-122 cm) gangions
 - 7-10 lb (3-5 kg) weights on each non-anchored skate end

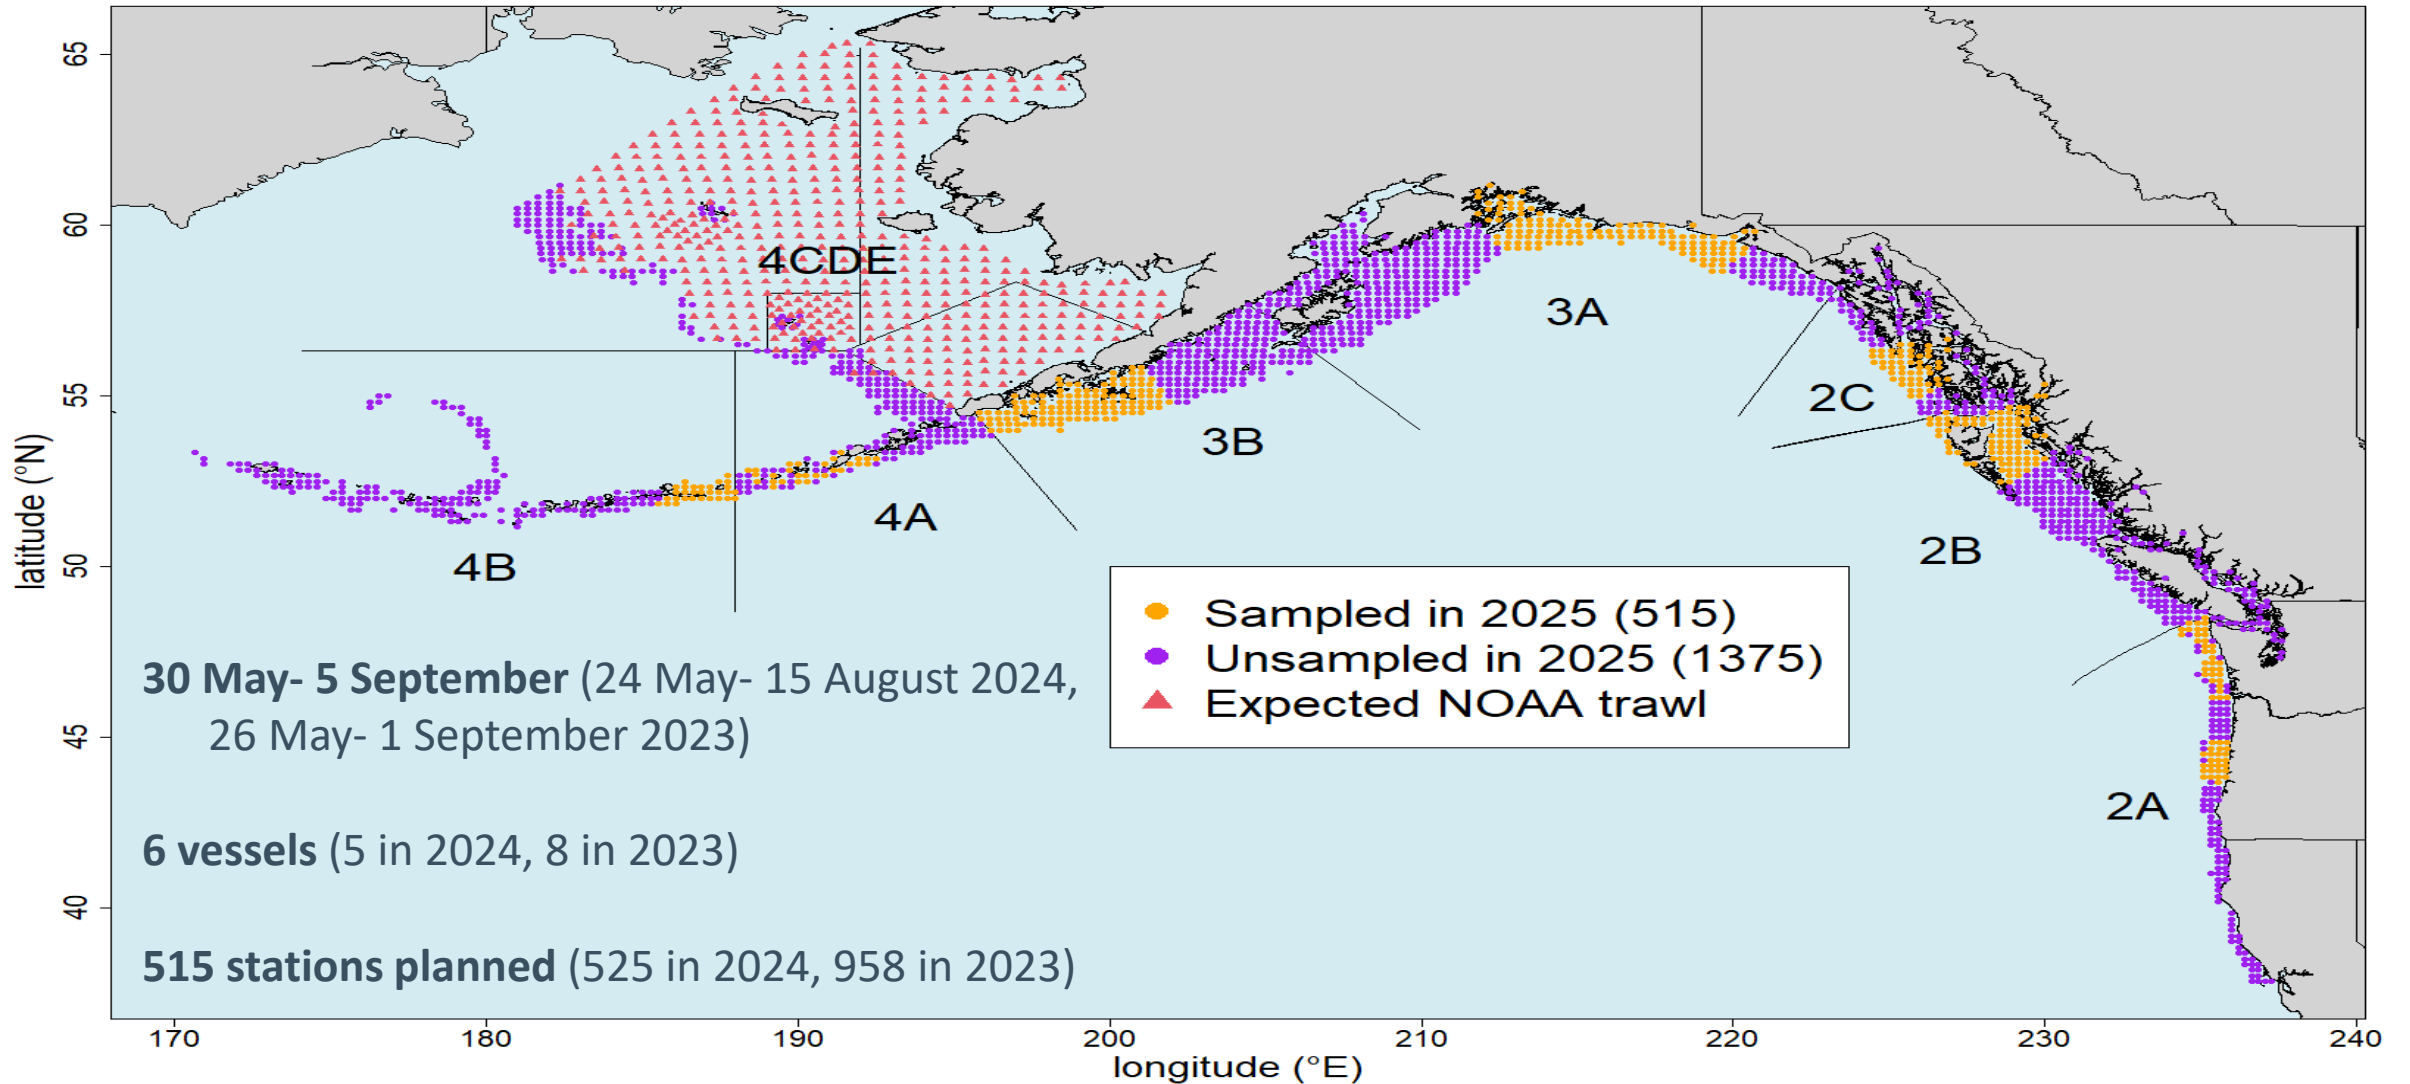

BAIT

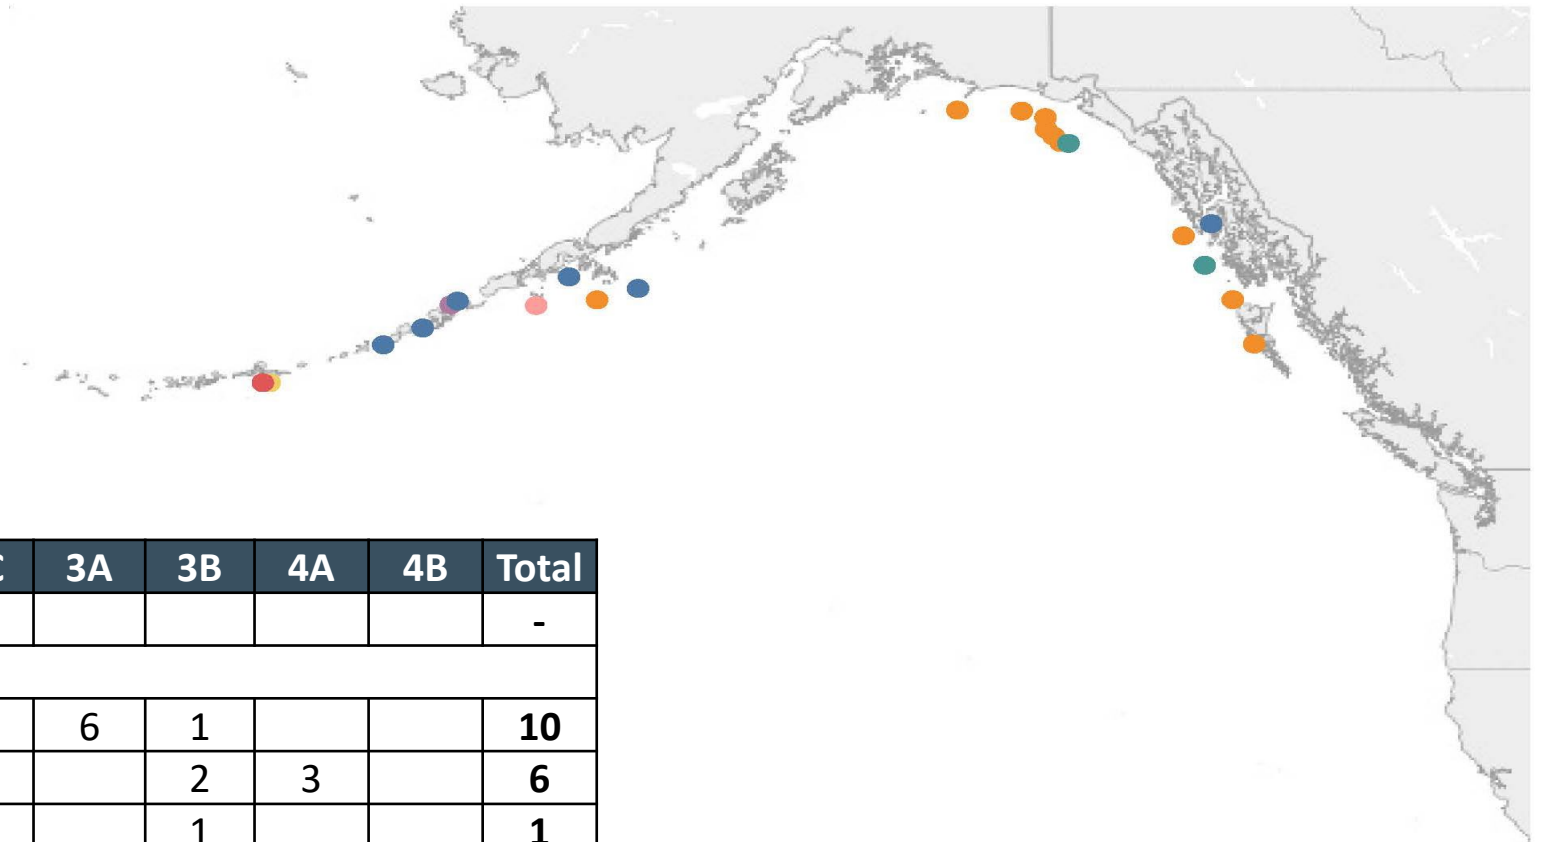

- Frozen chum salmon (*Oncorhynchus keta*) #2 semi-bright or better
- Cut 1/4 to 1/3 lb (1/10 to 1/6 kg)
- Captains sign off on bait quality

2025 Fishery-Independent Setline Survey (FISS)

Ineffective Stations in 2025

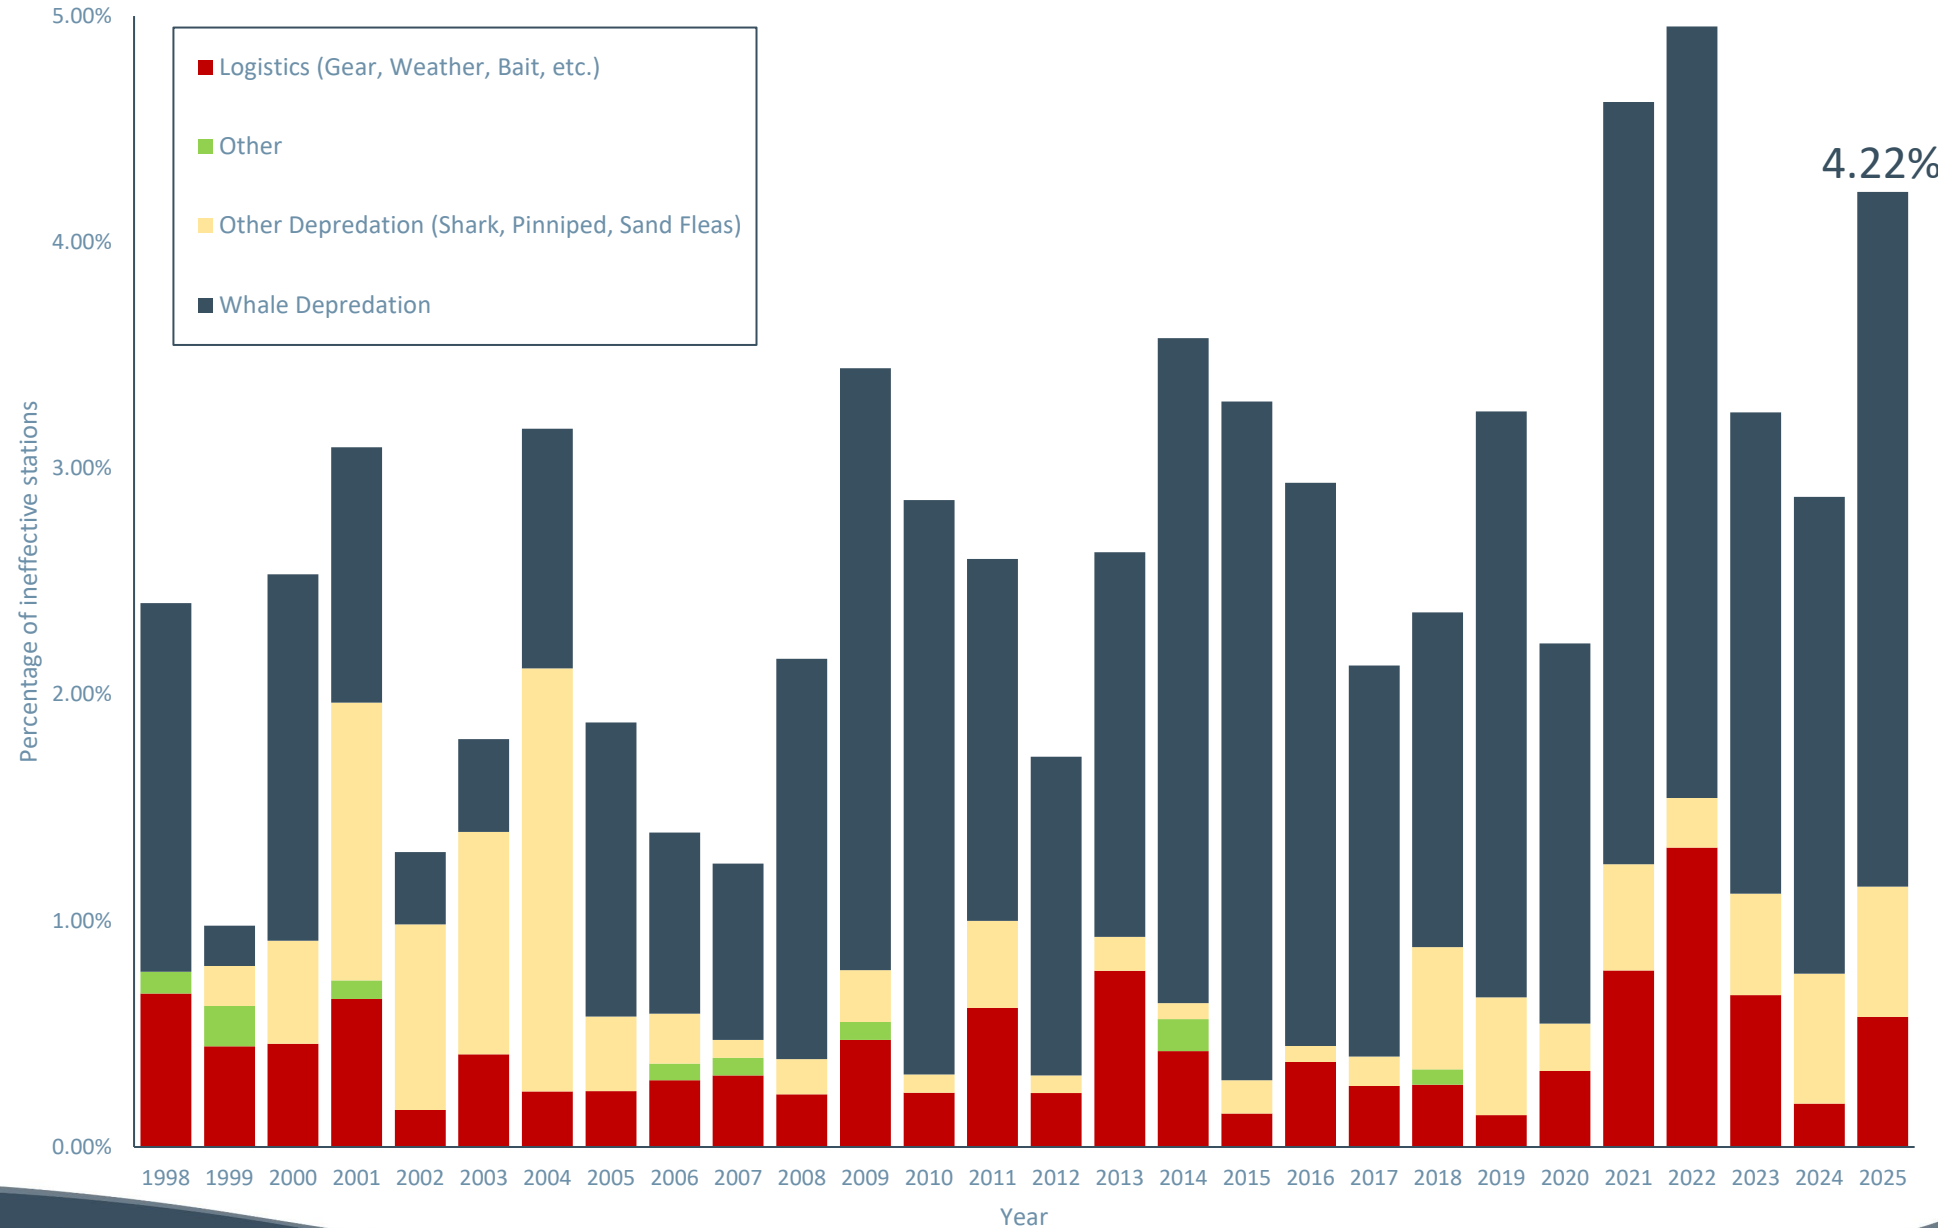

Description		2A	2B	2C	3A	3B	4A	4B	Total
Depredation: Shark									-
Depredation: Whale									
	Sperm Whale		2	1	6	1			10
	Orca			1		2	3		6
Depredation: Pinniped						1			1
Depredation: Other				1	1				2
Sand Fleas							1		1
Gear Issues								2	2
Total		-	2	3	7	4	4	2	22

Percentage of Ineffective Stations

- Changes in the FISS design from year to year will influence the number of ineffective stations
- Reg. Area 4A has the highest percentage of ineffective stations. This drives up whale depredation when included in the FISS.

Secondary Objective

- Cost effectiveness without compromising scientific integrity of the FISS design
 - Fish Sale Process
 - RFT for each sale
 - Rated against specified criteria provided to all interested buyers on sales notice
 - Established controls for review and approval for each sale
 - Multi-port bidding when feasible
 - Charter Agreements
 - RFTs
 - All submissions rated against specified criteria published in tender specifications

Secondary Objective

- Sale of sampled U32 Pacific halibut
- Price is 26% less than O32 Pacific halibut average price

Tertiary Objective

- Collaboration
 - NOAA Fisheries: Pacific Cod & Spiny dogfish sampling
 - ADFG: Dockside Rockfish Sampling in Prince William Sound
 - WDFW: 8 Rockfish Index Stations & Dockside Rockfish Sampling
 - ODFW: Dockside Rockfish Sampling
 - 2B: Dockside Rockfish sampling (DFO, Archipelago, PHMA) on hold for 2025
