## What estimates does ADF\&G provide to IPHC?

- Numbers of halibut harvested \& released
- Average weight of harvest
- Yield and release mortality in pounds
- Harvest prior to the IPHC survey in 2C, 3A
- Length composition (2C \& 3A; on request)
- Age and sex composition (3A only; on request)

## Data Sources

- Charter logbook (statewide, mandatory)
- Statewide harvest survey (mail)
- Creel surveys at major ports in 2C, 3A

## Charter Information (2017)

- Businesses that harvested halibut

| Area Fished | No. Businesses |
| :---: | :---: |
| $2 C$ | 240 |
| $3 A$ | 220 |
| $2 C$ and $3 A$ | 8 |
| $3 B$ | 3 |

## Analysis of Charter Management Measures for 2019

## General Methods

## Effort $\times$ HPUE $=$ Harvest

Harvest $\times$ Average Weight $=$ Yield

Yield + Release Mortality = Removals

## 2 C - Status Quo

- One fish bag limit, U38O80 reverse slot size limit

|  | 2018 Prelim Estimates | 2019 Forecast |
| :--- | :---: | :---: |
| Harvest (number of fish) | 71,107 | 75,988 |
| Average Weight (lbs) | 9.39 | 10.06 |
| Removals (Mlb) | 0.729 | 0.833 |

## Area 2C - Reverse Slot Limit

## - Management measure selected by NPFMC

- If the 2 C charter allocation is 0.81 Mlb , use status quo management measures
- If the allocation is above or below 0.81 Mlb , adjust the lower slot to keep the 2C charter sector within their allocation

## 2C - Charter Halibut Management

- The following options were not selected by the NPFMC:
- Annual limits of $1-5$ halibut
- Trip limit of 1 trip per permit and per vessel per day
- Closure of one day per week
- A combination of an annual limit and a trip limit

## 3A - Status Quo

- Status quo
- 2-fish bag limit/ one any size, one $\leq 28$ inches
- Annual limit 4 fish
- One trip per vessel per day and per CHP per day
- Wednesdays closed all year, six Tuesdays closed

|  | 2018 Prelim Estimate | 2019 Forecast |

## 2C - Charter Halibut Management

- The following options were not selected by the NPFMC:
- Reverse slot limit with annual limits of $1-5$ halibut
b Little harvest reduction at 5 \& 4 fish limits
- 6-50\% harvest reductions at 3-1 fish annual limits
- Reverse slot limit with trip limits of 1 trip per permit per vessel per day
- $2.1 \%$ harvest reduction (maximum)
- Reverse slot limit with a closure of one day per week
- 13-15\% harvest reduction (maximum)
- Reverse slot limit with a combination of an annual limit and a trip limit
- Effect of annual limit plus 2.1\% harvest reduction
- Less effect of trip limit at lower annual limits

## 3A - Charter Halibut Management

- The following options were not selected by the NPFMC:
- Status quo with Tuesdays closed June - August and additional day of the week closures
- Overall effect is $0.5-2.0 \%$ per closed day (maximum)
- Status quo with reverse slot limit on one fish
- Low harvest scenario: 127,778 fish; $1.364-1.879 \mathrm{Mlb}$
- High harvest scenario: 176,891 fish; 1.858-2.418 MIb

## Area 3A - Status quo + reverse slot limit

- Equivalent to different max size limits on both fish, but opportunity to harvest exceptional fish
- Size limit on first fish could increase retention of second fish
- Two harvest scenarios bracket likely range of harvest
- Low harvest scenario - same HPUE as status quo, assumes no increase in harvest or size of second fish
- High harvest scenario - assumes HPUE and weights of U28 fish are similar to 2013.

## Area 3A - Status quo + reverse slot limit

- Low harvest scenario: 127,778 fish
- No slot limit needed under reference level catch allocation
- Harvest ranges from 1.364-1.879 MIb
- High harvest scenario: 176,891 fish
- Workable size limits from U38050 to U50064
- Harvest ranges from 1.858-2.418 MIb
