

## Dr. Anna Kuparinen Biography

*22 September 2023*

---

**Dr. Anna Kuparinen's** research investigates on the interplay of ecology, evolutionary biology, and environmental sciences, using statistical and process-based modelling tools and empirical databases. She currently focuses predominantly in fishes and aquatic ecosystems and their interactions with human-induced and environmental stressors. In the past however, her research has covered terrestrial systems and explored, for example, mechanistic modelling of dispersal, movement dynamics, and gene flow.
